

Volkswagen Faces Fines and Damages for Cheating on Emissions Tests

Volkswagen is the next in a long line of auto manufacturers to lie to its customers in order to increase sales. The truth was recently discovered when diesel-powered vehicles sold in the U.S. and U.K. were found to contain technology that reduced emissions under testing conditions, bypassing EPA standards and cheating consumers into buying so-called “clean” cars. Last month, attorney Wayne Wright filed a nationwide [lawsuit against Volkswagen](#) in order to get Texans the compensation they deserve for the devaluation of their vehicles. Read more about what consumers can do to get justice here!

Don't Be a Turkey! Get the Facts on BAC to Avoid Drunk Driving on Thanksgiving

Would you know if you were too drunk to drive? The question may be easy to answer when you're sober, but almost impossible when you've had a few drinks—something that is likely to happen this Thanksgiving weekend. Before you sit down to your big meal, consider taking these [Thanksgiving drunk driving tips](#) to heart, including how to recognize the symptoms of one too many, why the risks of an accident increase at the end of November, and how to plan ahead to avoid a car crash over the Thanksgiving holiday.

Is a Defective Medical Device Threatening the Health of a Family Member?

Winter beckons us to spend time with our loved ones, chatting around the table and inquiring good-naturedly about their health. However, conversations can go from light to dark in an instant if your loved one has received a medical device that could be doing him more harm than good. Our articles provide an easy way to get the facts on [defective hip implants](#), [Zimmer knee device injuries](#), and [complications of IVC filters](#) intended to block blood clots. If your loved one has one of these devices installed, you should contact Wayne Wright LLP for more information immediately!

Patients Switching From Warfarin Should Beware the Dangers of Blood Thinners

Patients who have been taking Warfarin for years to prevent blood clots may be tempted to switch to some newcomers on the market, particularly if new drugs claim to be a low-maintenance alternative. However, some of these drugs—including [Pradaxa](#), [Xarelto](#), and [Eliquis](#)—can actually cause patients to bleed to death after hemorrhaging. Find out which patients are most at risk of hemorrhages when taking these anticoagulants, and what you can do to protect a family member who is taking one of these medications.
